

### **Objective**

On completion, you should be able to:

- Define Frequency, Wavelength, Band;
- Perform simple calculations involving frequency and wavelength; and
- Be familiar with the bands that make up the Electromagnetic Spectrum.

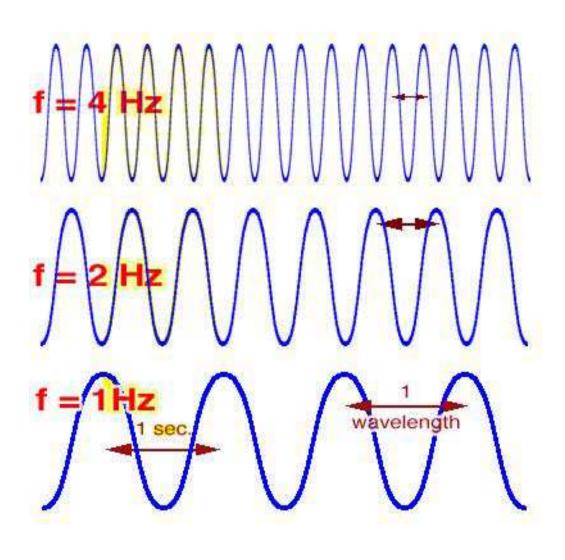

### **Wave Motion Terminology**

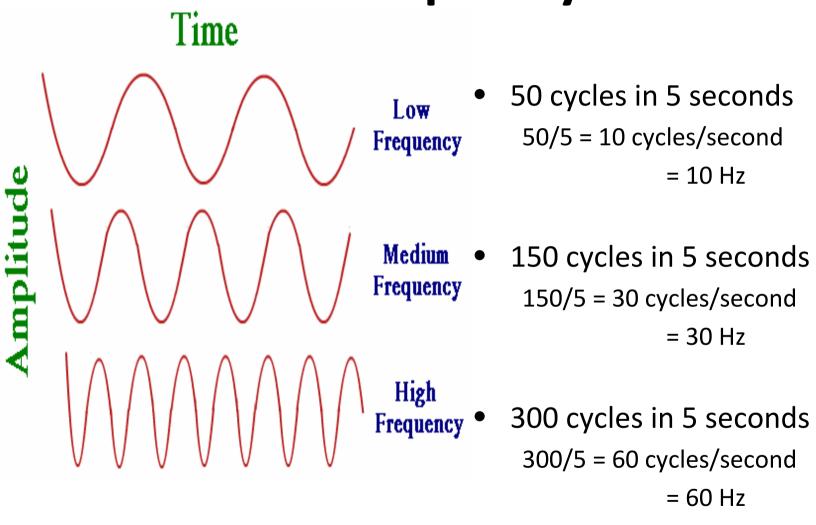

- Defined as the number of identical parts of a wave that pass a given point in a fixed period of time.
- For Electromagnetic (EM) waves, we use the second as the period of time.

- Unit of measurement is the **Hertz**.
- Abbreviation is Hz.
- One Hertz = 1 cycle per second.

- Example: 500 waves pass a point in 2 seconds.
   What is the frequency?
  - -500 cycles/2 seconds = 250 Hz

### **Frequency Units**

- The Hertz is too small for radio purposes.
- We use **Kilohertz**, **Megahertz** and **Gigahertz** as applicable:
  - -1 Kilohertz (KHz) = 1,000 Hz
  - -1 Megahertz (MHz) = 1,000,000 Hz = 1,000 KHz
  - -1 Gigahertz (GHz) = 1,000 MHz
- Example:
  - 3,750,000 Hz
  - = 3,750 KHz
  - = 3.750 MHz

### **Frequency Conversions**

 To change Kilohertz (KHz) to Megahertz (MHz), divide by 1000:

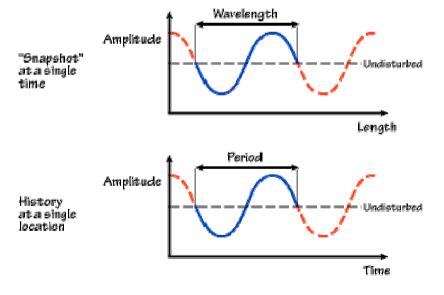

3755 KHz = 3755/1000 MHz = 3.755 MHz

 To change Megahertz (MHz) to Kilohertz (KHz), multiply by 1000:

14.295 MHz = 14.295 x 1000 KHz = 14,295 KHz

### **Period**

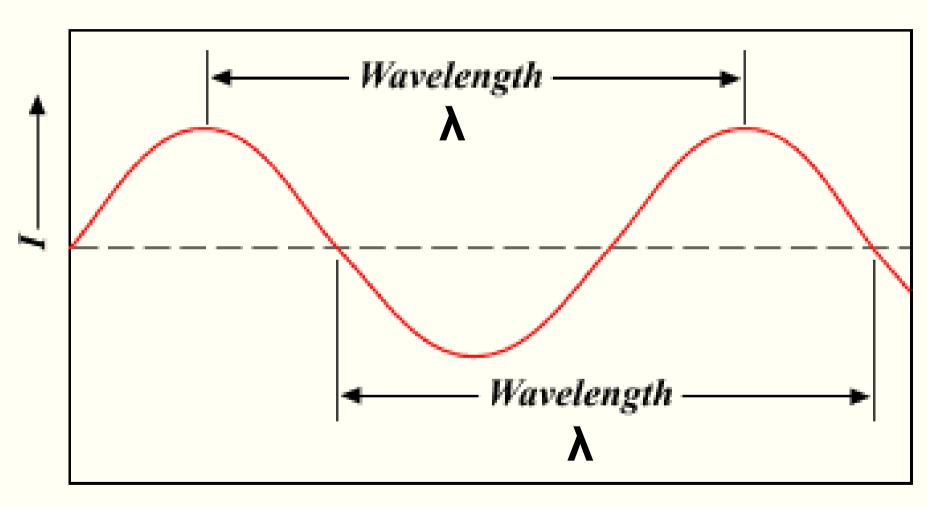

- The period of a wave is the time it takes to complete one full cycle.
- It is measured in seconds.
- Abbreviated T
- T = 1/f
- Example: f = 100 Hz

### Wavelength

- The distance a wave travels during one cycle is the Wavelength.
- For radio waves, the **meter** is the most common unit of length.
- For microwave frequencies, the centimeter is sometimes used.
- The symbol for wavelength is the Greek letter lambda λ.

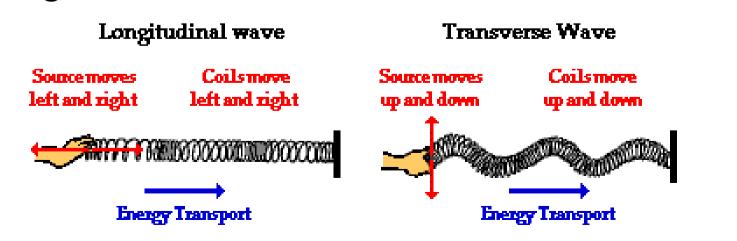

### Wave

Distance ----

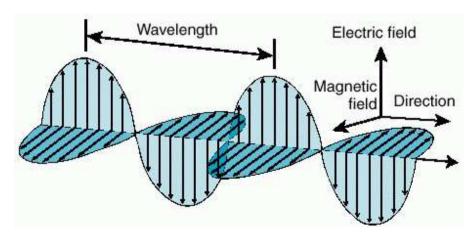

### Waves

- Transverse
  - Vibration is at right angles to direction of propagation, e.g.: guitar string
- Longitudinal
  - Vibration is parallel to direction of propagation,
     e.g.: sound waves

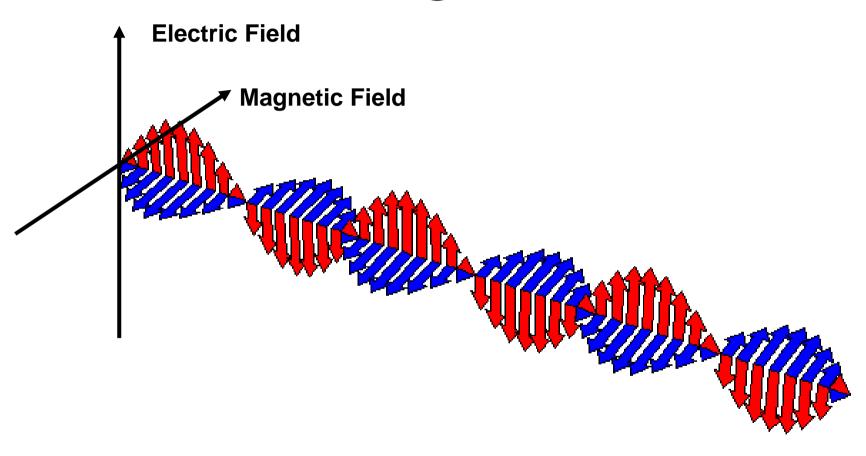

### **Electromagnetic (EM) Waves**

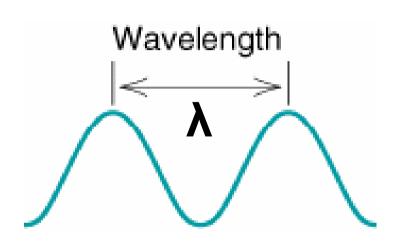

- Transverse waves
- Consist of Electric and Magnetic components:
  - In phase with each other; and
  - At right angles to each other.
- Orientation of Electric field determines Polarization.

### **Electromagnetic Waves**

### Radio Signal Wavelength

$$\lambda = \frac{c}{f}$$

- EM waves travel at the speed of light: c
- c = 300,000,000 m/sec
- The relationship between wavelength and frequency for an EM wave is given as:

$$\lambda = \frac{c}{f}$$

λ in meters, f in hertz and
 c = 300,000,000 m/sec

### **Frequency Equations**

 Because the Hertz is too small a unit to use for most practical radio work, we can use the following equations:

```
\lambda = 300 / f and f = 300 / \lambda where \lambda is in meters, and f in Megahertz
```

 What is the wavelength of an EM wave with a frequency of 7,200 KHz?

Convert 7,200 KHz to MHz

```
Convert 7,200 KHz to MHz
7,200/1000 = 7.2 MHz
```

```
\lambda =
```

```
Convert 7,200 KHz to MHz 7,200/1000 = 7.2 MHz \lambda = 300 / f
```

```
Convert 7,200 KHz to MHz
7,200/1000 = 7.2 MHz
```

```
\lambda = 300 / f
= 300/7.2
= 41.66 meters
```

### **Calculating Frequency**

 What is the frequency of an EM wave with a wavelength of 5.9 meters?

f =

### **Calculating Frequency**

 What is the frequency of an EM wave with a wavelength of 5.9 meters?

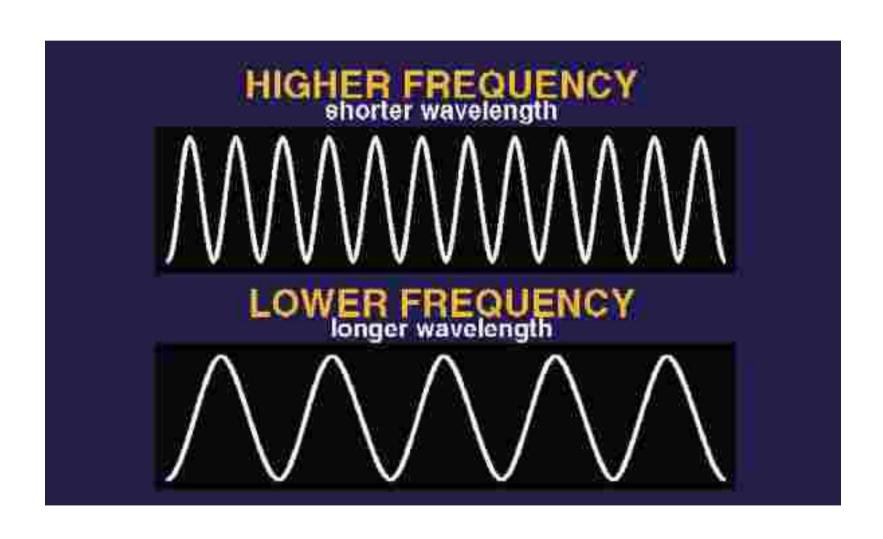

```
f = 300 / \lambda
```

### **Calculating Frequency**

 What is the frequency of an EM wave with a wavelength of 5.9 meters?

```
f = 300 / \lambda
= 300 / 5.9 meters
= 50.847 MHz
```

### Wavelength versus Frequency

### **Harmonics**

- Integer multiples of a given frequency.
- Example:

3.550 MHz is the **Fundamental** frequency.

Two x 3.550 MHz = 7.100 MHz ( $2^{nd}$  Harmonic)

Three x 3.550 MHz = 10.650 MHz ( $3^{rd}$  Harmonic)

Four x 3,550 MHz = 14.200 MHz ( $4^{th}$  Harmonic)

 Note: The slang term for a Ham's children is harmonics!

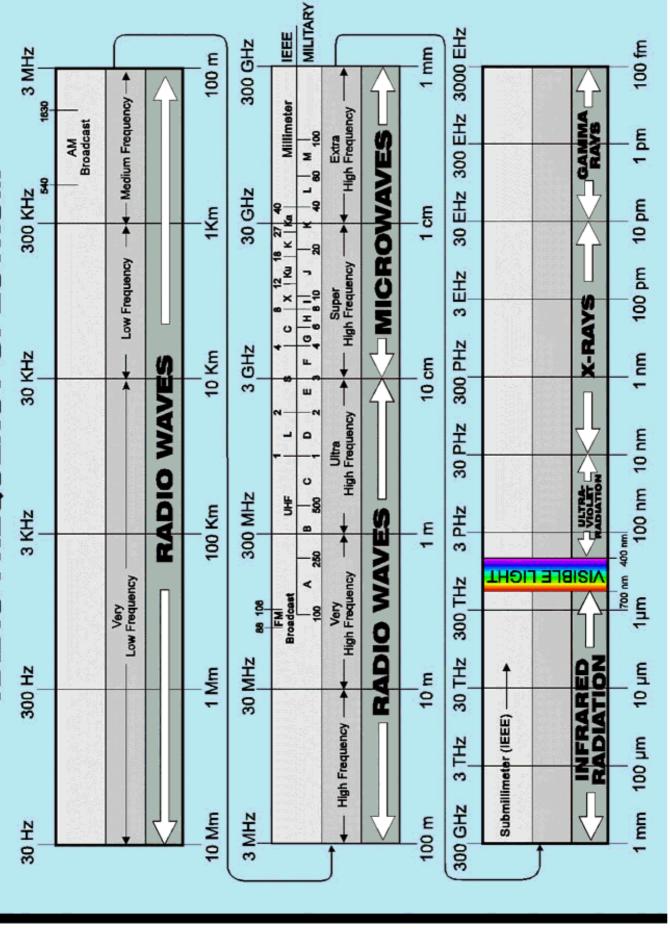

### **Frequency Allocations**

- Electromagnetic Spectrum consists of all frequencies that EM waves could have.
- We are concerned primarily with those between 3 KHz and 3000 GHz however.
- For convenience, there are two ways to group frequencies:
  - By a range of frequencies possessing similar characteristics; and
  - By groups of frequencies with a similar wavelength.

### **Electromagnetic Spectrum**

FREQUENCY	DESCRIPTION
30 GHz - 300 GHz	Extremely high frequency (EHF)
3 GHz - 30 GHz	Super high frequency (SHF)
300 MHz - 3 GHz	Ultrahigh frequency (UHF)
30 MHz - 300 MHz	Very high frequency (VHF)
3 MHz - 30 MHz	High frequency (HF)
300 kHz - 3 MHz	Medium frequency (MF)
30 kHz - 300 kHz	Low frequency (LF)
3 kHz - 30 kHz	Very low frequency (VLF)
300 Hz - 3 kHz	Voice frequency
up to 300 Hz	Extremely low frequency (ELF)

#### NOTES

1800 - 1840	CW may be used anywhere in the band but is normally used only up to 1840kHz
1830 - 1840	CW Priority for intercontinental operation (DX window)
1840 - 1850	SSB Priority for intercontinental operation (DX window)
1905 - 1915	DX Listening Window for JA CW
1850 - 1999	Includes AM and SSTV modes

In addition, the following "Centres of Activity" are recognized:

1812 ORP CW Centre

1890 SSTV Centre

1910 QRP SSB Centre

- Where Notes are shown, these activities have priority over other activities.
- During major weekend Contest activities, activity in certain modes can spill over into other segments.
- Sideband Usage Below 10MHz use lower sideband (LSB)
- Phone modes should not operate closer than 3000Hz to the lower segment edge.
- Narrow band digital modes: All modes using up to 500Hz bandwidth.

## 6m Band Plan: 50-54 MHz

Status: Amateur Exclusive

Size: Spectrum allocated: 4 MHz

Date: This plan was approved October 1997

FREQUENCY	UTILIZATION
50.0 - 50.6 further sub-allocated as: 50.0 - 50.050 50.050 - 50.1 50.1 50.1-50.6	Narrow Band Modes (SSB, AM) CW Beacons /Moonbounce CW/ Beacons CW Calling Frequency SSB and AM Modes (Bandwidth ≤ 2.3 kHz)
50.105 - 50.115 50.110 50.125 50.4	DX Window (listen for DX here) <sup>3</sup> DX Window calling frequency <sup>4</sup> National SSB calling frequency AM calling frequency
50.6 - 51.0 further sub-allocated as: 50.7 50.8 - 50.98 51.0 - 51.1 51.1 - 52.0	Experimental Modes <sup>1</sup> RTTY, AMTOR calling frequency Radio control of models, ten channels on a 20 kHz raster Pacific (ZL) DX window (SSB/CW only) <sup>2</sup> FM Voice simplex, and packet <sup>1</sup> National simplex packet calling frequency
52.0 - 52.05 52.0 - 53.0 52.525 53.0 - 54.0	Pacific (VK) DX window (SSB/CW only) <sup>2</sup> FM voice repeater inputs National FM calling frequency FM voice repeater outputs

#### Notes to 6 m Band Plan:

- In North America the following frequencies are suggested for Packet digipeater and packet scatter operation: 50.62/51.62, 50.68/51.68, 50.76/51.76, 50.64/51.64, 50.72/51.72, 50.78/51.78, 50.66/51.66, 50.74/51.74. Fun-located voice and packet repeaters, use high (input) and low (output) to provide maximum mutual frequency isolation.
- Amateurs are requested to avoid using fin or other wide band modes on these frequencies to minimize interference to Australian and New Zealand amateurs working into region 2 on SSB/CW.
- North American Amateurs are requested to avoid calling CQ DX on 50.110 MHz.

## 2m Band Plan: 144-148 MHz

Spectrum allocated: 4 MHz Status: Amateur Exclusive Size:

This plan was approved September 1995 Date:

FREQUENCY	UTILIZATION
144.000 - 144.100 144.100 - 144.275 144.200 144.200 - 144.275	moonbounce and terrestrial CW CW/SSB weak signal CW/SSB calling frequency (ACSSB, SSB, CW, RTTY), other modes with bandwidth less than 3 kHz (FAX, SSTV calling frequency) Propagation beacon network exclusive

146.010 - 146.370 146.400 - 146.580	Repeater inputs FM simplex <sup>5, 6</sup>
146.520 146.610 - 147.390 147.420 - 147.570	National FM calling frequency <sup>1</sup> Repeater Outputs <sup>10</sup> FM simplex (30 kHz raster) <sup>7</sup>
147.435 - 147.585 147.600 - 147.990	Digital (30 kHz raster) <sup>8</sup> Repeater inputs <sup>10</sup>

#### Notes on 2 m Band Plan:

- 1)
- Once communications are established move off the frequency to another channel.

  Seven (7) frequencies on a 20 kHz channel raster 144.37, 144.44, 144.44, 144.45, 144.47, 144.49. Œupancy to occur ONLY when available Digital frequencies within the sub bands 144.9 145.1 MHz and 145.59 145.79 MHz are exhausted. Consult with your local digital coordination body regarding maximum ERP, Bandwidth and coverage area within this sub band. Operation may occur on 144.31 MHz provided operating bandwidth, ERP do NOT cause harmful interference within the propagation beacon network sub band.

  Ten (10) frequencies on a 20 kHz channel raster. 144.91, 144.93, 144.97, 144.99, 145.01, 145.03, 145.05, 145.07, 145.09, and occur on department of the propagation beacon network sub band.
  - Eleven (11) frequencies on a 20 kHz channel raster 145.59, 145.61, 145.65, 145.65, 145.67, 145.69, 145.71, 145.73, 145.75, 145.77, 145.79 MH Consult with your local coordination body.

    The frequencies 146.40, 146.43, 146.46 MHz continue to be used as repeater inputs in some areas. Consult with your local coordination body. 4
